Removing the ETM Cable from Behind the Starter Motor

**WARNING: DO NOT cut the ETM electrical cable!**

If the electrical cable “B” for the ETM is routed behind the starter motor, you will need to remove the bracket “A” at the back of the starter.

**STEPS TO REMOVE THE ETM CABLE:**
1. Remove the 12mm bolt “C”
2. Remove both 8mm nuts “D” (2 nuts in total)
3. Slide the ETM cable “B” towards the back of the starter.
